### **New Bottle Mount Method**

Kenansville, NC – Prima Tech USA announces their newly patented, Bottle Mount Vaccinator (BMV) with Fast-fit. Designed to make the use of small dose bottles (<100cc) much more convenient, the quick-mount and quick release bottle receptor is made of a durable plastic and allows the change of medicine bottles in literally seconds. The new Fast-fit system is attached to Prima's totally new, auto-load BMV, this BMV is also of a completely new and more resilient design.

Designed from the ground up, the new Prima adjustable-dose BMV has larger, faster filling valves; stronger, longer lasting O-rings; and a more durable, surgical plastic body. The BMV also includes a quick-change luer-lock needle nut. A stainless-steel nub for the needle prevents barrel breaks and leaks. And the larger, more easily read numbers on the barrel reduce the chance of improper medicine administration. The handle drawback tension adjuster spring allows the applicator to adjust the speed and strength with which the plunger draws back to re-fill the barrel for the next injection.

The Prima BMV, with Fast-fit is available in all your Walco Distributors in 1cc, 2cc and 5cc, or ask your local vet or animal health distributor to order it for you directly from Prima Tech USA toll free at (888) 833-7099. The BMV will soon be available in an adjustable 0.5cc model. All BMVs easily adjust.
